

NEW Hypochlorous SANITIZING SPRAY

As meticulous cleaning and sanitizing has become a permanent national pastime, it's important to remember that many of the cleaning agents we use can be hazardous to our skin, health, surfaces, devices and the environment. The new Resque Hypochlorous Sanitizing Spray is a safe, yet highly effective disinfectant for use on skin and surfaces, offering gentle, yet effective infection control against germs, microbes, bacteria and viruses.

The star ingredient in this innovative new sanitizing spray is hypochlorous acid (HOCl).

Did You Know?

Hypochlorous acid actually naturally exists inside the human body – it's produced by white blood cells specifically to kill invasive organisms and to fight infections.

What is hypochlorous acid (HOCl)?

Resque Hypochlorous Sanitizing Spray is

A powerful, eco-friendly sanitiser and disinfectant that is extremely effective against bacteria, viruses and any other harmful pathogens.

Water +
Salt + Electricity
=
Hypochlorous Acid
(HOCl)

HOCl is made by running electricity (electrolysis) through water and salt. This powerful but extremely safe solution has been under development for many years. It has been used for treating wounds since World War 2. It works by disrupting the outer membrane of a virus or bacterium and then deactivating it from the inside.
