The Effects of Ageing on Skin

Our skin is at the mercy of many forces as we age: sun, harsh weather, and bad habits. But we can take steps to help our skin stay supple and fresh-looking.

How your skin ages will depend on a variety of factors: your lifestyle, diet, heredity, and other personal habits.

For instance, smoking can produce free radicals, once-healthy oxygen molecules that are now overactive and unstable.

Free radicals damage cells, leading to, among other things, premature wrinkles.

ANNIQUE
rooibos

There are other reasons, too.

Primary factors contributing to wrinkled, spotted skin include

- normal ageing,
- exposure to the sun (photoaging)
- pollution
- loss of subcutaneous support (fatty tissue between your skin and muscle).

Other factors that contribute to ageing of the skin include stress, gravity, daily facial movement, obesity and even sleep position.

Skin Changes That Come With Age

As we grow older, changes naturally occur. Skin becomes:

- Rougher
- Slack. The loss of the elastic tissue (elastin) in the skin with age causes the skin to hang loosely
- More transparent. This is caused by thinning of the epidermis (surface layer of the skin).
- More fragile. This is caused by a flattening of the area where the epidermis and dermis (layer of skin under the epidermis) come together.
- More easily bruised. This is due to thinner blood vessel walls.
