

GO WITH YOUR GUT

Good health starts in the gut. If you have an imbalance between good and harmful organisms in your digestive tract, it can lead to poor digestion and discomfort. Many illnesses develop due to prolonged imbalances in the gut, so taking care of your gut is critical. The entire gut lining is replenished every four days, so continual supplementation of probiotics is crucial for excellent health.

Annique's Forever Healthy OptiFlora+ is a probiotic supplement that will ensure nutrition is extracted from food and supplements, allowing the digestive system to function optimally.

It can even aid the body with absorbing vitamins and help eliminate digestive disorders.

WOW!

The Forever Healthy OptiFlora+ contains 18 billion colony-forming units of probiotics.

7 signs and causes of gut imbalance

-  Constipation, irritable bowel syndrome (IBS), bloating, belching, indigestion, diarrhoea, cramps
-  Food allergies or intolerances
-  Skin conditions like acne or eczema
-  Immune system deficiencies
-  Undesirable changes in bowel movements
-  Thrush-causing candida and other fungal infections
-  Taking antibiotics, contraceptive pills and hormone replacement therapy (HRT)

Forever Healthy Optiflora+ can help!

Forever Healthy OptiFlora+ 30 Capsules

This product is not intended to diagnose, treat, cure, or prevent any disease. Health supplements are intended to complement health and supplement diet.

#GoodToKnow

Most people have less than optimal digestive systems, leading to poor absorption of nutrients and allowing harmful bacteria to multiply in the body. The digestive system contains beneficial micro-organisms and enzymes that break down and absorb nutrients from food and acts as a barrier against infections in the intestines. Every single person should be taking a probiotic supplement. Its benefits are vast, from soothing digestive problems, clearing skin problems like eczema and allergies, and strengthening your immune system.
